

## POWER OUTAGE

To minimize the effects of a power outage:

1. When the power went off in your immediate area. This includes any equipment that can adequately be shut down.
  2. If you are advised to leave the area, follow your evacuation route and wait at the assembly area for further instructions.
  3. Leave at least one light switch "on" so you will know when the power is restored.
- **DO NOT** panic. Remain calm and let your eyes adjust to the darkened condition.
  - **DO NOT** move around. If no other means is available, leaving these doors closed will keep food and other refrigerated items (experimentation) cold as long as possible.

✓ Good!
