

[ITS Newsletter Archives](#)

Information Technology Services' series of monthly emails to all employees aimed at improving communications with campus about tips, information, technology updates and services offered in ITS.

Esports Summer Camps Happening This Month

St. Cloud State students and high school students interested in gaming, production, casting, streaming, social media influencing or leadership are encouraged to attend an [Esports Immersion Camp](#). Participants are sure to find value in these sessions where Esports professionals will take participants through every aspect of what it takes to produce and play in their very own live-streamed and shoutcasted Esports tournament.

Students who join the [SCSU Esports Discord](#) can find a promo code that discounts the camp down just to \$99.

IT Support for Incoming Students

Advising & Registration (A&R) Days is an important opportunity for new students to experience the technology services the University offers. ITS prepares the computers that help students register during A&R Days, provides Campus Card, StarID and multi-factor authentication support, and is available to provide technology assistance. Students should contact [HuskyTech](#) with technology questions or issues. We look forward to meeting our new Huskies!

Anti-Virus Software Change for macOS Computers

To help reduce expenses and better align our anti-virus products with Microsoft technologies at St. Cloud State, we are transitioning from our current anti-virus software, Jamf Protect, to Microsoft Defender for all University-owned macOS computers on June 6th. We have successfully piloted this change throughout ITS with no issues.

This change will apply to all macOS users on campus, however there should be no noticeable impact to you or your

work because of this change. If you have any questions or concerns, please contact [your technician](#).

Microsoft Teams for Storing Files

Microsoft Teams, available through St. Cloud State's Microsoft Office 365 service, offers collaboration hubs (Teams) where conversations, meetings, files and notes can be accessed by anyone with access to the Team anytime, anywhere. Teams is ITS's recommended solution for storing files, allowing multiple people to edit documents simultaneously, easily share documents and easily access documents even while away from campus.

Please [contact ITS](#) if your department is interested in transitioning files to Teams and/or if you are interested in Teams training.

IT Security Tip: Report "Phishy" Emails using Outlook's Report Message Feature

Outlook has a built-in tool that allows you to easily report suspicious messages. This tool initiates an automated process to assess a potential phishing attack, and remove and block that email or sender, if appropriate. More information about this tool is available in the [Knowledge Base](#).

Emails that go directly to your "Junk" folder do not need to be reported. If you are unsure if an email is safe or legitimate, contact phishing@stcloudstate.edu about your concerns with the suspicious email attached.

Did You Know: Outlook Calendar Statuses

Keeping your Outlook calendar updated is a helpful way to communicate your availability to others. You can indicate times that you are free, working elsewhere, tentatively available, busy or out of the office busy without having to grant others greater access to the details of your calendar.

More information about using availability statuses on Outlook calendars is available on the [Knowledge Base](#).
