In previous years, we used a different screener question for the binge drinking questions. Previously, we asked if the respondent drank alcohol at all. Those that answered they did not, we skipped this question. This year, however, we did not ask that question but used as a screen question, how many drinks the respondent had in a typical week. Those that answered zero were skipped this question. Thus, the comparison between years should be evaluated with the knowledge the eligible respondents who received this question were arrived at differently.
